Getting Started:

Your requirement:

Freelancer Project:

Few hours work. I need a software completed. My software collects data and turns it into CSV-file for Shopify.

Further Finalized Discussion on Freelancer Chat

You want to scrap TKMAX https://www.tkmaxx.com/uk/en/ all categories and products and want to upload them to to your shopify store. Once the products will be available on your shopify store you want to proceed with the orders with your fulfillment center. To proceed with your fulfillment center you will be providing us their API details or other details that how we can connect with them. Further you want to have a desktop application where you would be able to update information of all the products available on TKMAX. In addition, you want to install apps to your store.

My Proposal

You will have a desktop application service or a python script which will run on its own after every few seconds or minutes whatever you will decide. It will scrap all the products of TKMAX and will push them in your shopify store.

However, you will have a desktop application from where you would be able to set profit on products or categories whatever you choose. Along with the profit margin you would be able to set following properties.

Description
Variant stock (sizes)
Inventory
Profit-margin

An image will be shown as well but you won't be able to change image. However, you can only see the image to better understand that which product details you are going to update.

As you wanted to install following apps at your shopify store:

Order lookup, Help center, LOOX, SMSbump, Klaviyo, Recart (Facebook), Zipify, Bold multi currency, Easy tagging, Discount ninja, Discounted upsale

We will look into the details of these apps and will let you know which of them are feasible and can be integrated easily.

We will integrate your store with products from TKMax and will integrate your orders with your fulfillment center. We need to have details about your fulfillment center API Key or any other

details which will help us to connect with them. We will populate all the cheapest products on the front page.

Your other idea that you want to collect orders in a specific time interval let's say in last 15 minutes you want to combine order and want to send to the fulfillment center. This needs a development of custom plugin which will be doing this task. We can include this in our separate project once this project will be closed. After that you may come to freelancer profile and may hire me again or you can open a new project at freelancer and I will bid on it. I hope we will have a long term relationship.

I am proposing you above tasks in 350$ and will deliver it to you by 8th of August. As you can wait till 17th of August too so I will let you know either I will deliver it to you by 8th or 17th. I am sure we will deliver it to you by 8th of August.

Looking forward to hearing from you.

Best,
Afnan
